TECHNISCHE UNIVERSITÄT DRESDEN

Faculty of Electrical and Computer Engineering , Communications Laboratory, Deutsche Telekom Chair of Communication Networks

Compressed Compute-and-Forward with correlated audio signals

Dresden, 14.07.2016

DRESDEN concept
Exzellenz aus Wissenschaft und Kultur

Raphael Hildebrand, Orell Garten, Florian Roth, Lucas Weber

Table of Content

Task

- develop software to correlate stereo audio streams
- develop models for characteristic values to describe correlation
- record audio signals

Underlying theory (crosscorrelation)

time domain

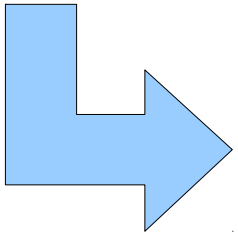
$$\psi_{xy}^{E}(\tau) = \int_{-\infty}^{\infty} x(t) \cdot y(t+\tau)\,\mathrm{d}t$$

[ISV, S. 48 f]

frequency domain

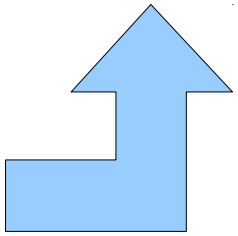
$$\underline{\Psi}(\omega) = \underline{X}^{*}(\omega) \cdot \underline{Y}(\omega)$$

[ISV, S. 180]



$$\underline{\Psi}(\omega) = \int_{-\infty}^{\infty} x(-t) * y(t) \cdot e^{-j\omega t}\,dt$$

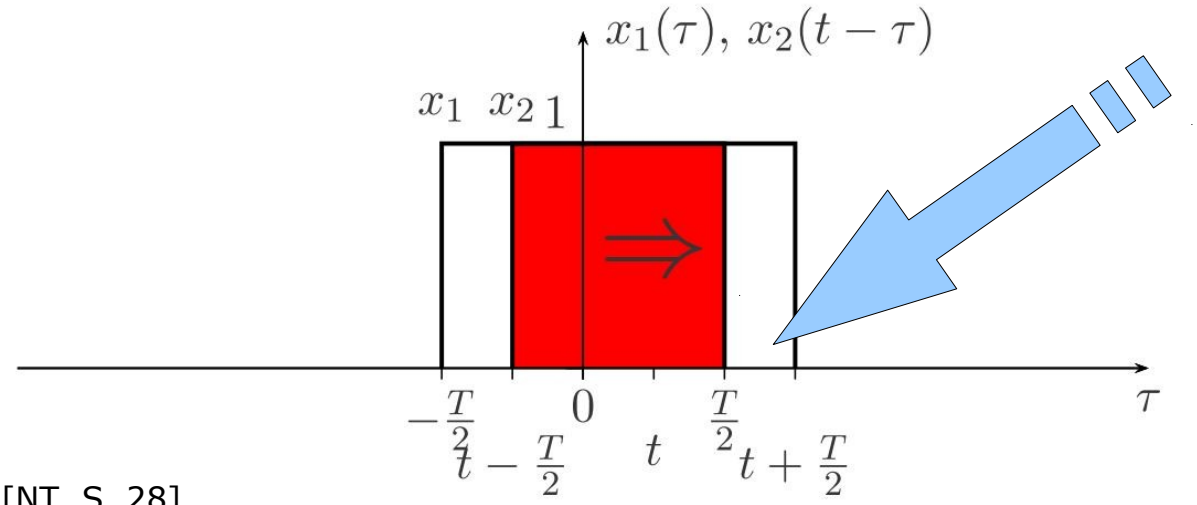
[ISV, S. 180]



convolution theorem

[ISV] Rüdiger Hoffmann, Matthias Wolff: Intelligente Signalverarbeitung 1. Springer Verlag Berlin Heidelberg 2014

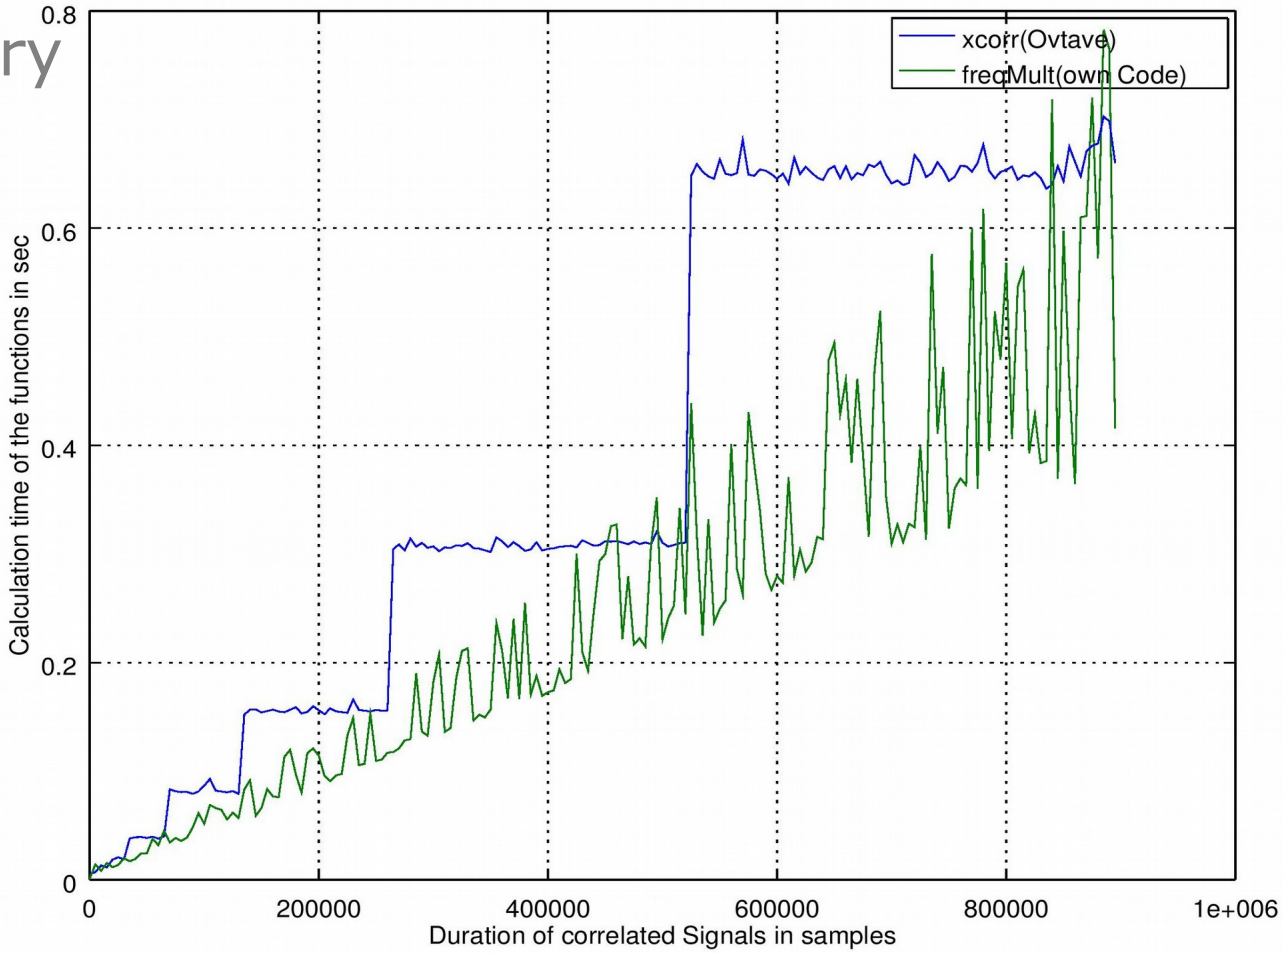
Underlying theory



[NT, S. 28]

[NT]Prof. Dr.-Ing. Dr. h.c. Gerhard P. Fettweis: Einführung in die Nachrichtentechnik. Technische Universität Dresden, Fakultät Elektrotechnik, Vodafone Stiftungslehrstuhl Mobile Nachrichtensysteme, D-01062 Dresden Sommersemester 2015

Underlying theory



Designed Characteristical Values

- Aim: check what kinds of signals are suitable for compressed-sensing
  → classify signals
- Categories: physical information and shape of cross-correlation
- express characteristics in numbers
  -simplify characteristics
  -developed parameters have to stay valid

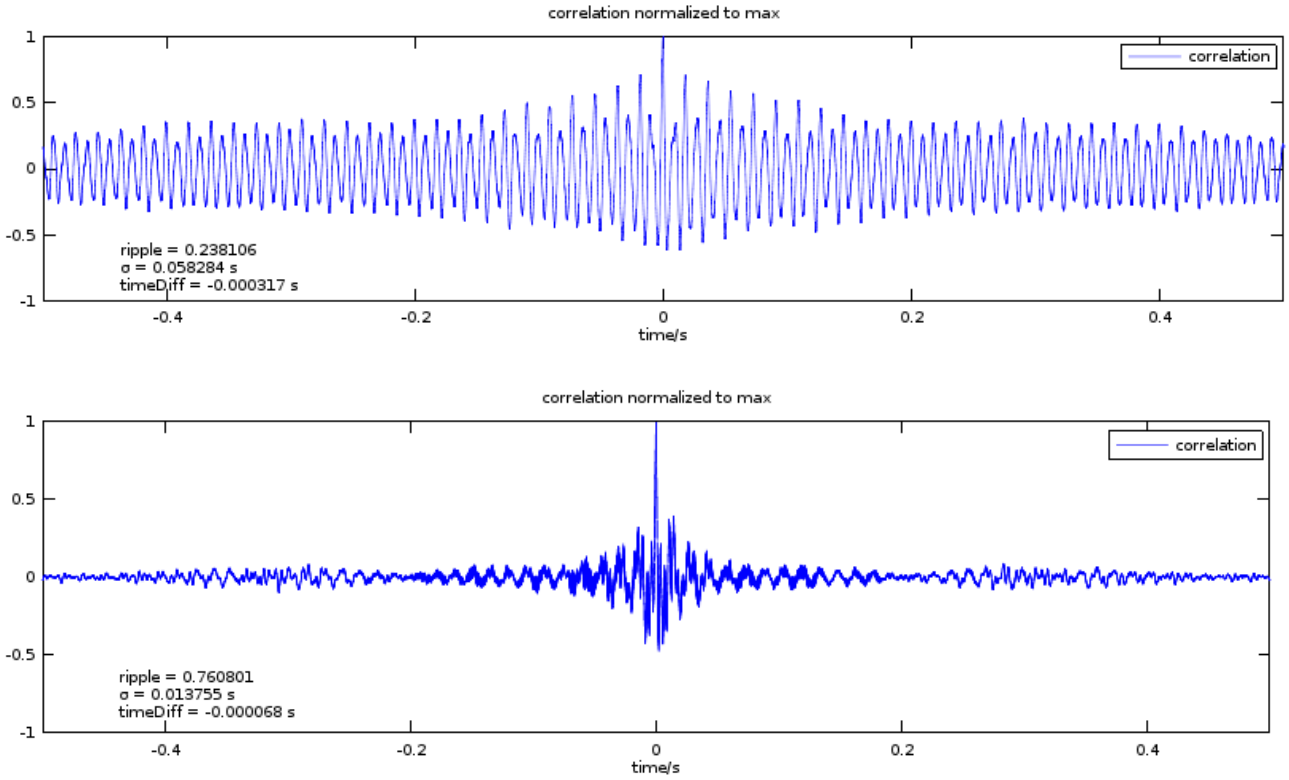
Designed Characteristical Values – ripple

- Scale for energy distribution of the signal

$$ripple = \frac{\sum_{\text{der obersten 5 Perzentile}} x_i^2}{\sum_{i=1}^{N} x_i^2}$$

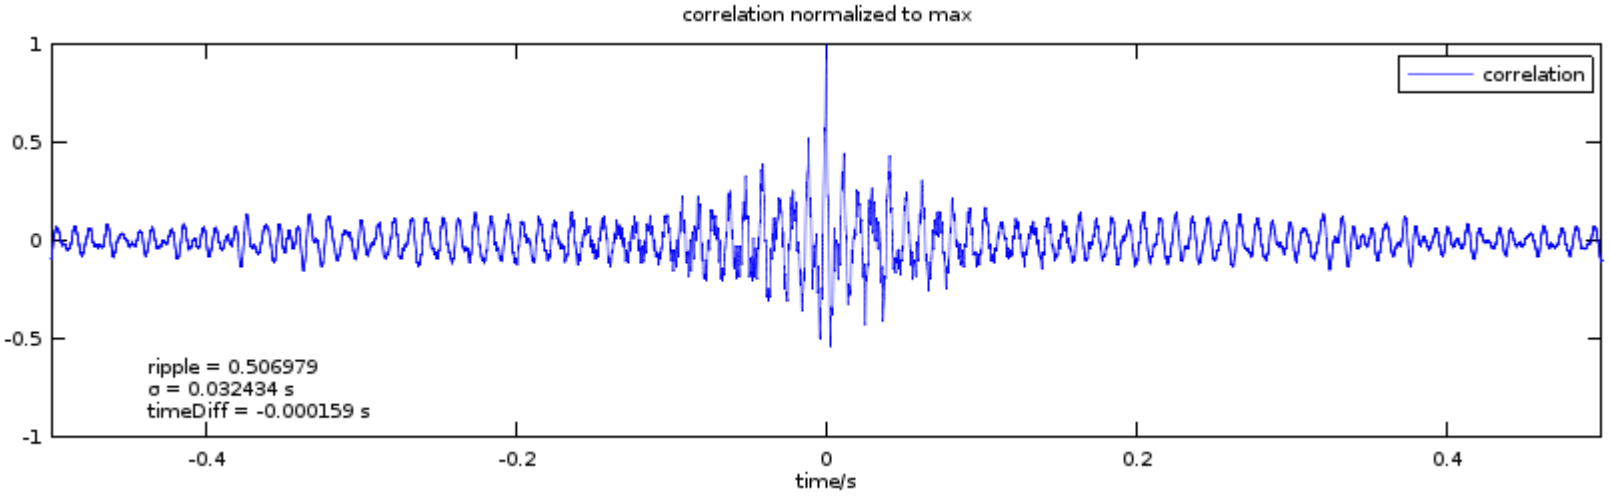
- $0 \leq ripple \leq 1$

Designed Characteristical Values – ripple



Designed Characteristical Values – sigma

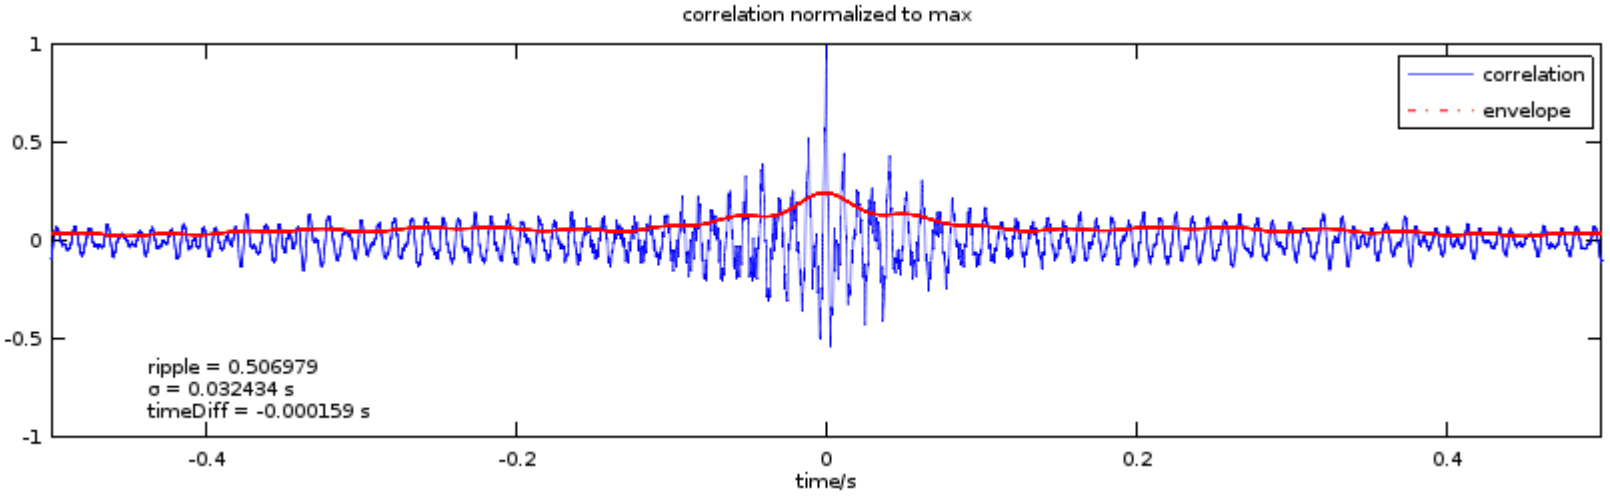
- Typical shape of a cross-correlation:



- Find a scale for width of the peak

Designed Characteristical Values – sigma

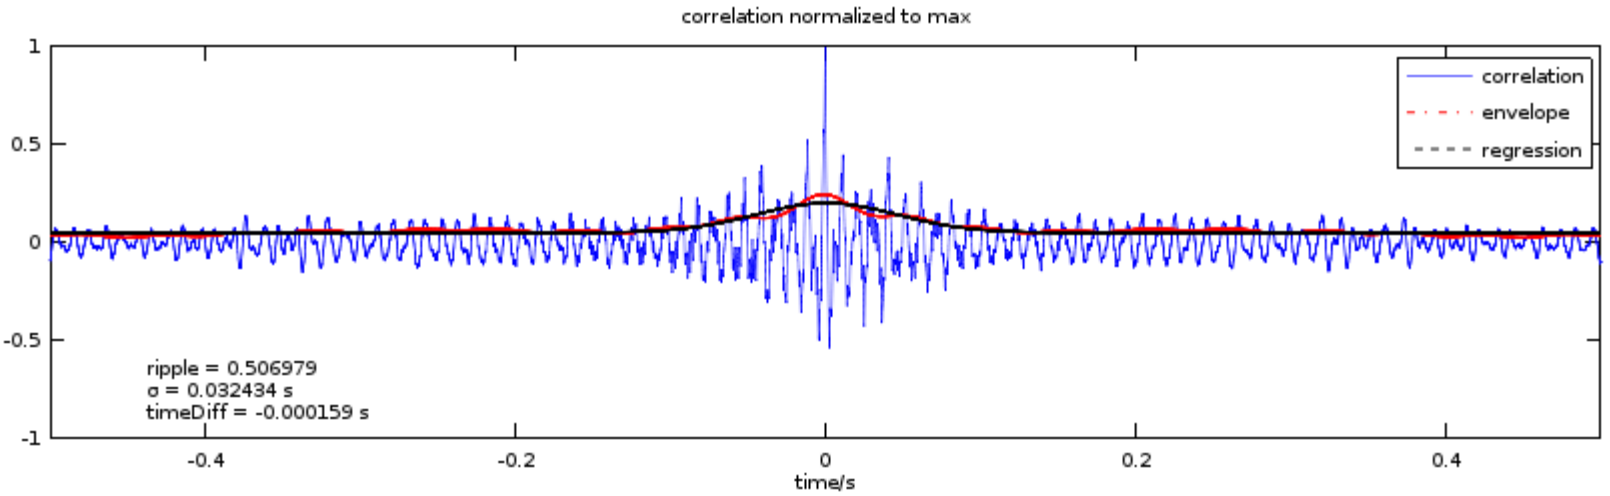
- Amplitude-demodulation to receive an envelope:



Designed Characteristical Values – sigma

- Fit a bell-shaped curve to envelope:

$$y = a \cdot e^{-\frac{(x-\mu)^2}{2\sigma^2}} + b$$



- Take sigma as value

Octave script

- modular and easily extendable
- processing lots of files
- concise output format

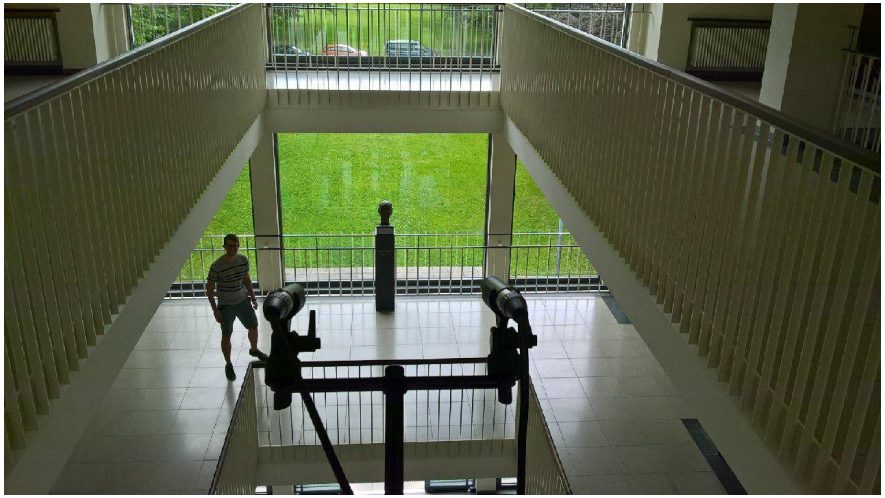
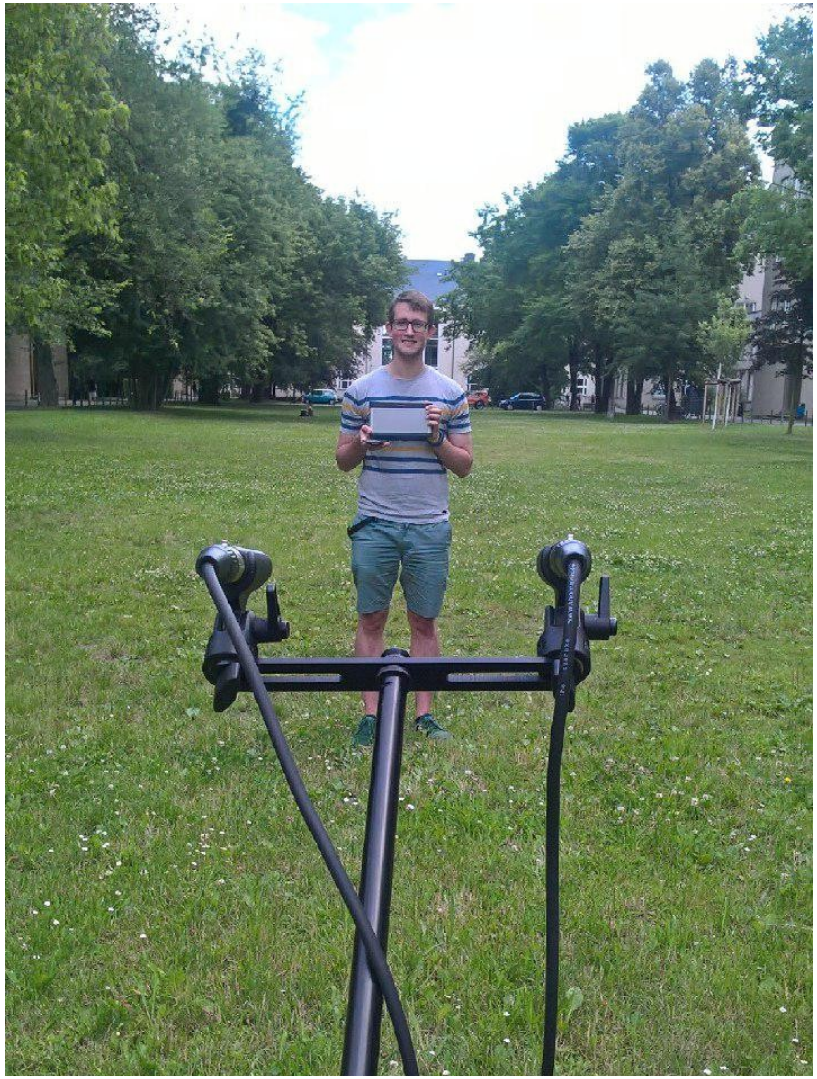
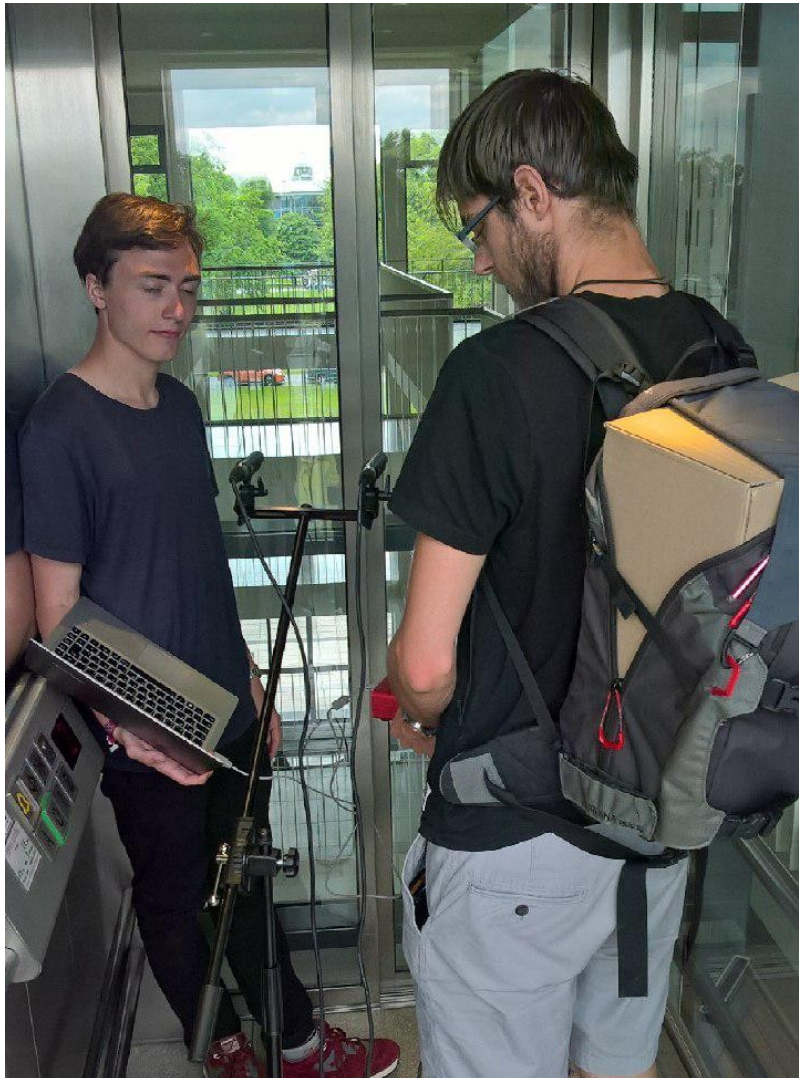
Recorded Signals



Recorded Signals





Recorded Signals

Recorded Signals

- Cardioid characteristic not omnidirectional characteristic
- Without primarily sound source low SNR
- With sound source less informations about the room characteristic
- Gauß-fit useful at ripple-factor > 0.3

Conclusion

- Octave tool for automated correlation of lots of data
- fairly simple models to classify correlation
- software can easily be extended with own models and analysis functions
- compact excel spreadsheet for easy selection of test signals

»Wissen schafft Brücken.«
